

ADITYA TIWARI

Senior AI Analyst | Generative AI & Agentic AI | RAG | FastAPI & Python | LLM Orchestration | SQL & Vector Databases

Noida, Uttar Pradesh, India | +91-86199 99198 | adityatiwari4533@gmail.com | linkedin.com/in/aditya-tiwarib17871248

PROFESSIONAL SUMMARY

AI Analyst and Business Analyst with 3+ years of experience at HCLTech building and deploying **AI-powered solutions** across multiple customer-support and analytics projects. Hands-on experience designing **Generative AI, Agentic AI, and Retrieval-Augmented Generation (RAG)** systems, building production-grade **FastAPI** services with **asynchronous programming patterns**, and orchestrating **LLM-driven agent workflows** for automated incident creation, ticket-status retrieval, and query resolution. Applied AI to optimize daily productivity across multiple customer-support workstreams, contributing to measurable revenue impact while **cutting manual support effort by 60% and manual workforce dependency by 65%**. Certified in Microsoft Fabric (DP-700), Azure Administration (AZ-104), IBM AI Engineering, and Power BI, with a Data Science research internship at IIT Guwahati. Skilled in SQL/DBMS data modelling, vector and relational databases, model evaluation, and translating ambiguous business requirements into scalable AI solutions. Comfortable partnering with cross-functional and global stakeholders, mentoring junior engineers, and driving AI strategy end to end.

TECHNICAL SKILLS

- **Generative & Agentic AI:** RAG pipelines · Agentic workflows / multi-agent orchestration · Prompt engineering · LLM APIs (OpenAI, Azure OpenAI) · LangChain-style orchestration · Vector search & embeddings · NLP · Predictive & Generative modelling
- **Software Engineering:** Python · FastAPI · Asynchronous programming (async/await, event loops) · REST/SOAP APIs · Microservices · Git/GitHub · Azure DevOps · CI/CD
- **Data & Databases:** SQL (complex queries, joins, CTEs, window functions – SSMS, MySQL, Oracle DB) · Vector databases · Data modelling (star schema) · Azure Data Lake · Azure Data Factory · Azure Synapse Analytics · ETL pipelines · OneLake
- **AI/ML & Data Science:** scikit-learn · TensorFlow · pandas · NumPy · Matplotlib · Seaborn · Model evaluation & experimentation · Time-series forecasting · Classification, regression & clustering
- **BI & Visualization:** Power BI (DAX, Power Query/M) · Microsoft Fabric · Real-time dashboards · KPI design · Excel (PivotTables, VLOOKUP, advanced formulas)
- **Business Analysis:** Requirements gathering · BRD/FRD writing · Use-case documentation · Gap analysis · Process mapping · Stakeholder management · UAT
- **Cloud & Methodologies:** Microsoft Azure (AZ-104) · Agile/Scrum · ITIL v4 · Root-cause analysis · Six Sigma (concepts) · Data storytelling

CERTIFICATIONS

- Microsoft Certified: Fabric Analytics Engineer Associate (DP-700)
- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Power BI Data Analyst
- IBM Certified AI Engineer
- Agile Project Management
- ServiceNow Certified System Administrator (CSA)
- ServiceNow Certified Application Developer (CAD)

PROFESSIONAL EXPERIENCE

Business Analyst – AI, Data & Analytics | HCLTech

Sep 2023 – Present (2 yrs 9 mos) • Noida, Uttar Pradesh, India

- Applied **AI and automation to optimize daily productivity across multiple customer-support projects**, contributing directly to revenue growth while **reducing manual support time by 60% and manual workforce dependency by 65%**.
- Designed and deployed an **agentic AI chatbot** for L1 customer support that auto-handles user queries, raises incidents, and provides live ticket status — see Key Projects for details.

- Built and orchestrated **LLM-driven agent workflows** integrated with ServiceNow REST APIs to automate intent classification, incident creation, and status look-ups, cutting L1 escalations and manual triage.
- Developed a **Python + Azure Cognitive Services NLP model** to classify and route 10,000+ monthly service emails by sentiment and urgency, reducing misclassification by 35% and improving first-response SLA.
- Built **predictive incident-volume forecasting models** (Python/scikit-learn) achieving 89% accuracy, informing 7-day staffing outlook and reducing SLA breaches by 22%.
- Designed and delivered 5+ **real-time Power BI dashboards** tracking SLA compliance, MTTR, first-contact resolution, and incident trends, consumed daily by senior leadership across 3 global regions.
- Engineered a **ServiceNow–Azure DevOps analytics pipeline** auto-syncing sprint velocity, burndown, and defect metrics to executive Power BI reports, eliminating 15+ hours/week of manual data aggregation.
- Conducted end-to-end **business requirements gathering** with IT, HR, Finance, and Operations stakeholders, translating ambiguous briefs into data models, KPI frameworks, and analytical/AI solutions.
- Built complex **SQL queries and Power Query/M transformations** to extract, cleanse, and reshape large datasets from Azure Data Lake and SQL Server, cutting data-preparation time by 60%.
- Authored Business Requirements Documents (BRDs), data dictionaries, and process-flow diagrams adopted as standard templates for the global analytics team.
- Presented monthly AI and business-performance reviews to senior stakeholders, translating complex datasets and model outcomes into clear narratives and recommended actions.

Business Analyst Intern | HCLTech

Mar 2023 – Sep 2023 (7 mos) • Noida, Uttar Pradesh, India

- Assisted in scoping and documenting business requirements for 3 internal automation projects; created process-flow diagrams and UAT scripts.
- Built SQL queries and Excel dashboards to track service-desk KPIs and SLA adherence; reports used by team leads in weekly review meetings.
- Designed Power Automate flows integrated with ServiceNow REST APIs, saving approx. 10 hours/week of manual data collection.
- Conducted data-quality audits and cleansing on operational datasets, improving accuracy of management-information reporting by 25%.

TechBee IT Scholar | HCLTech

Sep 2022 – Mar 2023 (7 mos) • Noida, Uttar Pradesh, India

- Completed structured training in ITIL, SQL Server, Oracle DB, Windows Server, Cloud Computing, Red Hat Linux, and Cisco Networking — foundation for current AI, analytics, and data-engineering work.

Data Science Research Intern | Indian Institute of Technology, Guwahati (IIT-G)

Dec 2024 – Mar 2026 (1 yr 4 mos) • Remote / Guwahati, Assam, India

- Built **machine learning pipelines** (classification, regression, clustering) using Python — scikit-learn, TensorFlow, pandas — on real-world research datasets under faculty supervision.
- Designed **end-to-end data pipelines** for structured and unstructured data ingestion, feature engineering, and model evaluation; documented methodologies in technical reports.
- Performed statistical analysis and visualisation (Matplotlib, Seaborn) to communicate research findings to interdisciplinary academic audiences.
- Applied ML outputs to automate IT-service categorisation, demonstrating integration of advanced analytics into operational business workflows.

KEY PROJECTS

Agentic AI Chatbot for L1 Customer Support — Python · FastAPI · LLM Orchestration · RAG · Agentic Workflows · ServiceNow REST API

- Designed and built an end-to-end conversational AI chatbot handling L1 customer-support queries, using a **multi-agent architecture** with specialized agents for intent classification, incident creation, and ticket-status retrieval.
- Implemented a **RAG pipeline** over internal knowledge-base articles so the chatbot could auto-resolve common queries without human intervention.
- Integrated agent workflows with **ServiceNow REST APIs** to autonomously raise incidents and fetch live ticket status, reducing L1 escalations and manual handling.

- Exposed the assistant as a production-grade **FastAPI** microservice using **asynchronous request handling** for low-latency, high-concurrency performance.
- Contributed to a **60% reduction in manual support time** and **65% reduction in manual workforce dependency** across supported customer-service workstreams.

AI-Powered Resume & JD-Matching Generator — *Python · LLM APIs · Prompt Engineering · FastAPI*

- Built a GenAI application where users describe their background and the tool auto-generates a structured, ATS-friendly resume.
- Extended the tool so users can paste a target job description; the system asks clarifying follow-up questions and re-tailors the resume to align with the JD's requirements and keywords.
- Applied prompt-engineering techniques to keep outputs structured, consistent, and free of hallucinated experience.

Predictive Incident-Volume Forecasting — *Python · scikit-learn · SQL · Power BI*

- Built a time-series model predicting weekly incident volumes from 18 months of historical data (89% accuracy); integrated forecasts into Power BI for proactive resource planning.
- Presented methodology and outcomes to senior leadership; forecast-driven staffing changes reduced SLA breaches by 22%.

Sentiment-Based Email Analytics & Intelligent Routing — *Python · NLP · Azure Cognitive Services · Power BI*

- Analysed 10,000+ monthly emails using NLP; built a sentiment-trend dashboard enabling management to monitor customer-experience quality over time.
- Reduced misclassification rate by 35%; routing automation freed L1 analysts for higher-value work.

Real-Time Service Desk KPI Dashboard — *Power BI · DAX · SQL · ServiceNow REST API · Azure*

- Ingested live ServiceNow data via REST API into Power BI; modelled data with star-schema design and DAX measures for YoY, MoM, rolling-average, and traffic-light KPI visuals.
- Reduced management reporting cycle from 2 days to real-time; adopted as the standard reporting tool across 3 global support teams supporting 5,000+ users.

EDUCATION

Bachelor of Computer Applications (BCA)

Amity University, Noida · Specialisation: Computer Science & AI · Sep 2023 – Oct 2026 (Expected)

12th Standard — CBSE

A's Steward Morris School, Bhilwara, Rajasthan · Jun 2021 – Jul 2022

KEY STRENGTHS

- Full-stack AI delivery: Generative AI, Agentic AI, RAG, and FastAPI-based production services
- Proven impact: reduced manual support effort by 60% and manual workforce dependency by 65% through applied AI
- Strong data foundation: SQL, vector & relational databases, Azure Data Lake/Synapse, Microsoft Fabric (DP-700)
- Research-grade analytical rigour from a Data Science internship at IIT Guwahati
- Business-analysis background: requirements gathering, stakeholder management, and translating ambiguous asks into shipped AI solutions
- Track record mentoring interns/junior team members and driving Agile, cross-functional delivery
